

Risk Engineering Cell

Risk Engineering

We at Liberty General Insurance Limited help you protect your property, employees and profitability. Risk Engineering Cell offers advises related to operational management, project management, site safety and also conduct a complete risk management solution to mitigate the loss exposures of the risk.

Every business has a risk associated with it. We provide these services not just to a multi-national giant but also to a Small & Medium Enterprise. LGIC's Risk Engineering Cell has qualified specialists in the areas of fire protection, industrial safety, liability, transportation, equipment breakdown, business continuity and workers safety. We assist you in reducing risk exposure and providing effective loss control solution. This would result in mitigation of a physical loss as well as the down time for the business.

KEY SERVICES OFFERED BY US INCLUDE:

Thermography Audit

To compete in the global economy, small-business owners must maximize uptime and protect their assets by identifying and implementing state-of-the-art predictive maintenance and loss prevention tools. Infrared (IR) thermography is a nondestructive inspection technique that can pinpoint concerns in industrial electrical and mechanical systems. A professionally administered IR program can identify impending failures in electrical equipment; production machinery; fired equipment, such as boilers and furnaces; and utility supplies and prevent business interruptions.

For small industries, it's a costly affair to maintain an IR camera and train resource for such analysis. Understanding such requirement, we launched thermography services for our client with no extra cost. Thermography helps our client in maintaining machines / equipment, hence minimizing breakdowns, leading to cost saving.

Property Risk Assessment

Our property risk assessment services provide review of risk control practices available at site. We provide our customers and partners practical guidance to address and minimize workplace risk. Together we develop integrated solutions that first address the areas of risk that offer the greatest opportunities for safety improvement and cost savings.

PROPERTY RISK ASSESSMENT INCLUDES:

Fire & Allied Risk Assessment: It helps in evaluating exposure present in your business from fire and allied perils and developing loss preventive measures.

Storage Risk Assessment: It helps in choosing the best storage and Warehouse methods to help reduce losses arising from this area.

Machinery Assessment: It helps in developing best maintenance philosophy, identification of critical machinery, interdependency and exposure.

Natural Hazard Assessment: We assist you in evaluations of the exposures your building and operations may have to natural hazards such as flood, windstorm and earthquake.

Business Interruption Risk Assessment

It helps in developing risk mitigation measures that will reduce the risk of lost production based on identified exposure to your organization. This service will help you to reinstate your business after an incident in minimum time span.

Work Place Safety

In the world of business, keeping pace with the output and ensuring continued success is a key.

Thus, there is no doubt that, each employee is an important and inseparable element of this process, who works in various capacities and work atmosphere.

It only takes one accident to have tragic economic and emotional consequences. Your employees are one of your company's greatest assets and hence their safety at the workplace is of prime importance to you.

Workplace safety is an important part of any work environment. This can be a construction site, production unit or a small office with very little movement. The important point to remember is that accidents can happen anywhere. With good training, safety practices and the necessary equipment, such accidents can be avoided or mitigated.

We would like to be with you in this endeavour and contribute towards the risk management process to build a safer work place.

Electrical Audit

It helps in verification of statutory compliance with respect to Central Electricity Authority/ Indian Electricity Rules. It also used as a tool to analyze electrical hazards (shock, fire, explosion, overloading), review of lightning protection system, static electricity hazards, type of electrical fittings, work permits, interlocks, lockout tags, etc.

Publish Technical Documents

We assist you in developing work permit, safety check-lists, flood precautionary checklist, emergency response planning and many such technical documents
